

## UFOREK Cannabinoid Market Position

Be The Leading Hemp CBD and HEMP Delta-9 THC Health and Wellness Company In N. America

01

By providing safe, superior Hemp CBD and Hemp Delta 9 THC products with real benefits and real results

02

By providing effective CBD and THC strengths /dosages that work quickly

03

By providing Health and Wellness Benefits through functional Hemp D-9 THC Products

UFOREK.COM

## The UFOREK Technology Difference

01

### **Michelle Formulations -Advanced Absorption Technology**

UFOREK Micelle technology Pre-digests the Hemp and other cannabinoids for quicker absorption in the body

02

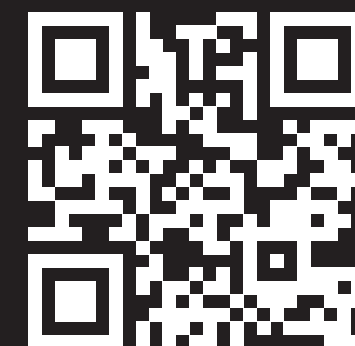

### **Fast Melt Caramels & Gummies Technology**

Fast Melts caramels and gummies are sublingual absorption for 5-10-minute absorption and quicker results

03

### **UFOREK CBD & Delta 9 THC... Stronger, Faster, Safer, Better!**

- 2400 MG Roll-On
- 5000 MG Oil Drops
- 100MG Fast-Melt Caramels
- 20MG Gummies
- Strong, Powerful, Safe Topical Application
- Powerful, Safe, Effective Sublingual Drops
- Fast, Powerful, Broad Spectrum CBD Dose
- Safe and Effective

## UFOREK Hemp CBD Delta-9 THC In The U.S.

The 2018 Farm Bill legalized the production and sale of industrial hemp and hemp-derived products in the United States, including those containing THC at no more than 0.3% on a dry weight basis.

This means that hemp products, including those containing .03% THC below the legal limit, are no longer considered controlled substances under federal law.

CBD Delta-9 (D9) Terminology

Isolate-Means one (1) Cannabinoid present in the product

Broad Spectrum –Means multiple cannabinoids present working synergistically

Full Spectrum Broad Spectrum plus .03% THC Present

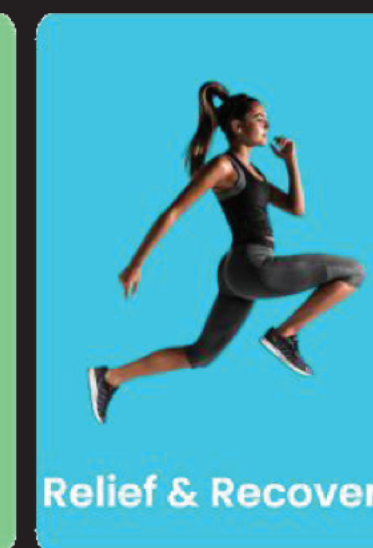

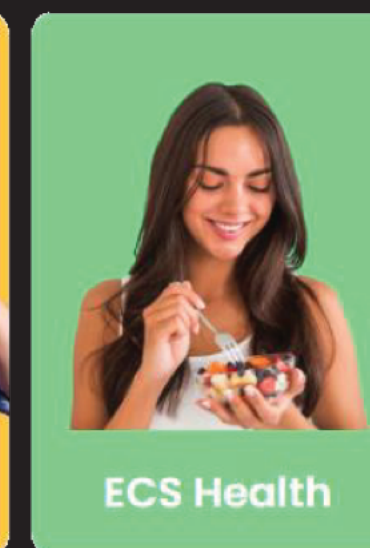

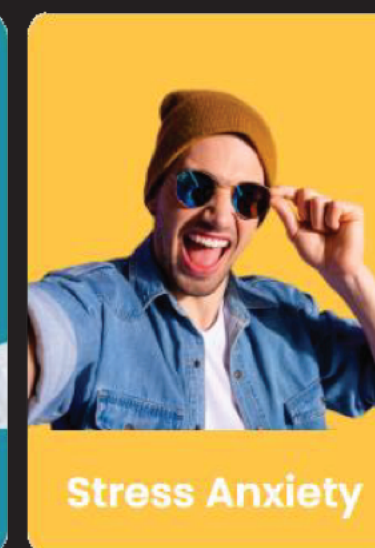

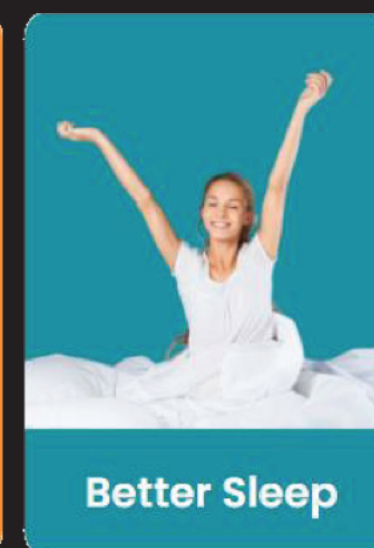

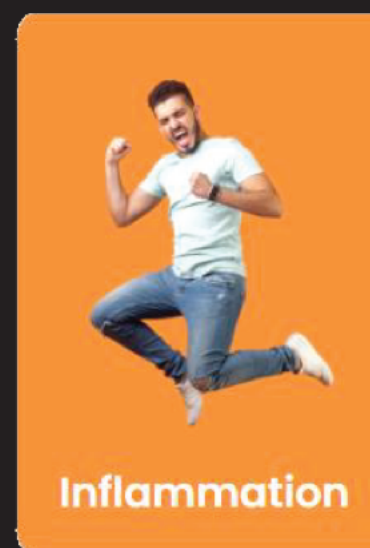

## Top CBD D9 THC Health and Wellness Benefits

1. Promotes Pain Relief
2. Promotes Inflammation Relief
3. Promotes Stress and Anxiety Relief
4. Better Restorative, Deep Sleep
5. Nourishes ESC
6. Heightens Sensory Perception (Sight, Sound, Touch, Taste, Smell)
7. Elevates The Mind
8. Helps with PTSD
9. Helps with Seizures

## UFOREK CBD D9 THC features a proprietary micellar-Nanotechnology to produce a cannabidiol molecule that enhance the solubility and bioavailability of all cannabinoids into the human body

Background Cannabinoids are not water-soluble compound resulting in poor oral bioavailability that leads to slow, inefficient blood stream absorption of Cannabinoids. To overcome the poor absorption of Cannabinoids into the body, we utilize a proprietary micellar nano technology that produces a highly bioavailable cannabinoid molecules.

The technology utilizes a unique manufacturing process that forms a Cannabinoid micellular nano sized molecule that can more easily be passed through the intestinal barrier resulting in a more enhanced delivery and bioavailability of cannabinoids into the body. Once in the body, cannabinoid binds with receptors including CB1 and CB2, which are part of the endocannabinoid system involved in a variety of physiological processes including appetite, pain sensation, mood and memory.

The proprietary micellular technology provides a new revolutionizing approach to encapsulate the oral bioavailability of cannabinoids. Additionally, the micellular technology allows a more consistent dose of cannabinoids delivered into the body this way does optimize the health benefits of cannabinoids and created homeostatic (balance) in the body.

## What is Micelle?

A typical micelle is a nano or picometer sized vesicular membrane made soluble in water by having a hydrophilic (water loving) “head” facing the outside, while the hydrophobic (water hating) tails surround the fatsoluble nutrient inside which allows absorption of fat soluble compounds including cannabinoids into the body.

Micelle Water Soluble Technology (MWSTP) is based on a unique micelle formation which enhances the water solubility of functionality ingredients resulting in an increased bioavailability and stability of all Cannabinoids. A simple way to explain the technology: The MWST is producing micelles which mimic the body’s natural producing micelle function (inside the body) necessary to absorb fat soluble active into the body. Research has demonstrated that micelles improve the oral bioavailability of water insoluble compounds such as Cannabinoids, up to 8 times (800%) when compared to non-encapsulated fat soluble (balance) in the body.

**Conclusion** The nano-Cannabinoid/CBD ingredients formed from the MWST are often referred to as a “predigested” micellar format that is similar to our body’s natural processes necessary to absorb insoluble ingredients into the body.

If you want to read about specific scientific studies for THC research, CBD research, or any other topic, go to the [Google Scholar search page](#) and perform a search. Include the particular cannabinoid of interest or use a more general search such as “CBD and \_\_\_\_\_”

Or “Delta 9 thc and \_\_\_\_\_”
